Eval Portal and L0 Review

HarmonyGames · Fixed environment date: October 1, 2025 or February 14, 2026, 00:00 UTC · Updated October 26, 2026

How to run your reviews in the Original Conference Eval Portal, and how to submit the pass screens that prove each one passed.

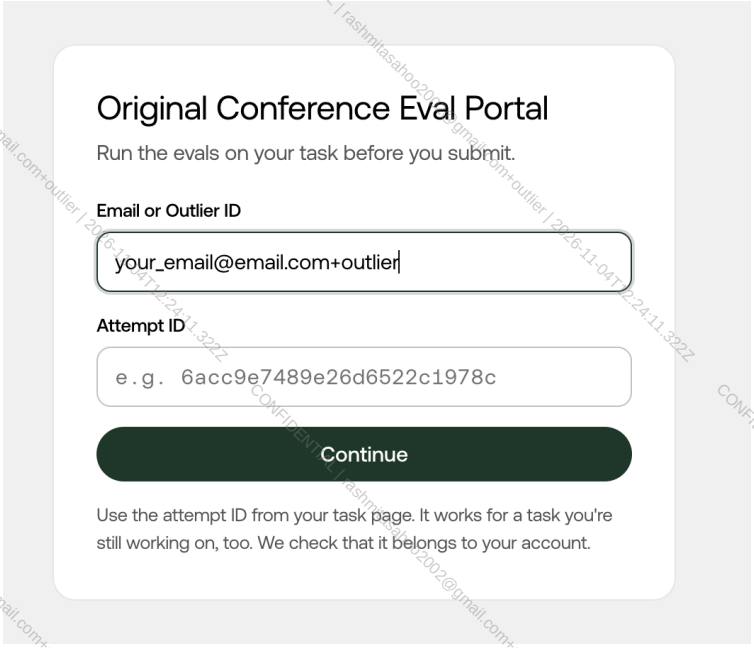

0 · The flow at a glance

1. **Log in** to the Eval Portal with your email or Outlier ID and your attempt ID.
2. **Explore the data** in the chat while you build your task.
3. **Add your task inputs** in the chat.
4. **Run the reviews:** `/injection`, `/prompt`, `/hardness`, `/oe`, and `/rubric`, the same ones you ran before.
5. **Screenshot the pass screen** of every review that passes.
6. **Post your proof** in the Eval Pass Submission form.

> **ONLY THE PASS SCREEN COUNTS**
>
> Report cards, chat messages and FAIL results are not accepted as proof. Every passing review needs its own pass screen screenshot.

1 · Log in

Open the Eval Portal and sign in with two things: your **email or Outlier ID (**make sure to add + outlier towards the end**)**, and the **attempt ID** from your task page. The attempt ID works for a task you are still working on, too, and the portal checks that it belongs to your account. Everything you add and every review you run is saved to that attempt.

The sign-in screen

2 · Explore the data

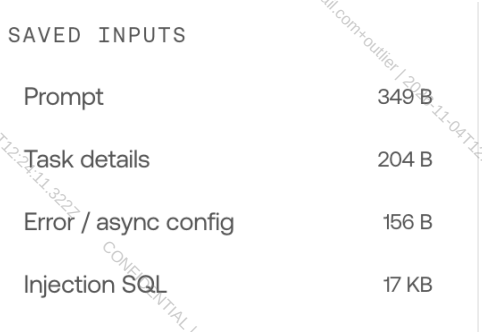

Use the portal to look through the universe while you build your task. Type your question in the chat with no command in front of it, and the portal answers from the universe data. Explore before you write your prompt and SQL injection, and come back whenever you need to check a value.

What you want	What to type (examples)
Find where something lives	Which Slack channels talk about the Combo Fighters launch?
Read specific records	Show the Linear tickets assigned to Leonard, with their state and due date.
Check what your persona can see	Can Marcus Bennett read #ua-spend?
Get a value you will reuse	What was the total Meta spend in Snowflake for February 1-11, 2026?
Check dates	List the messages in #zombie-marketing dated after February 10, 2026.

> **EXPLORE, DO NOT WRITE**
> You may use the portal to explore the universe and evaluate your task. You may not use it to write your prompt, your Oracle Events, or your rubric criteria.

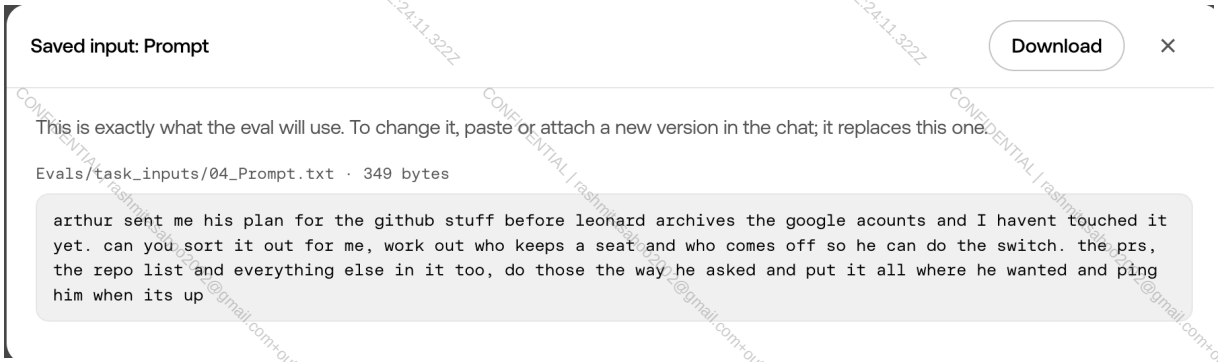

3 · Add your task inputs

Paste your inputs into the chat, or attach them as files with **Attach**. Each input is saved to the attempt and listed under **Saved inputs** in the sidebar: your prompt, the task details (persona, role, business function, competency, task skill and horizon, universe date and difficulty mode), your error / async config, your injection SQL, and later your Oracle Events and rubric.

Saved inputs in the sidebar

Click a saved input to see exactly what the eval will use. You can download it from there.

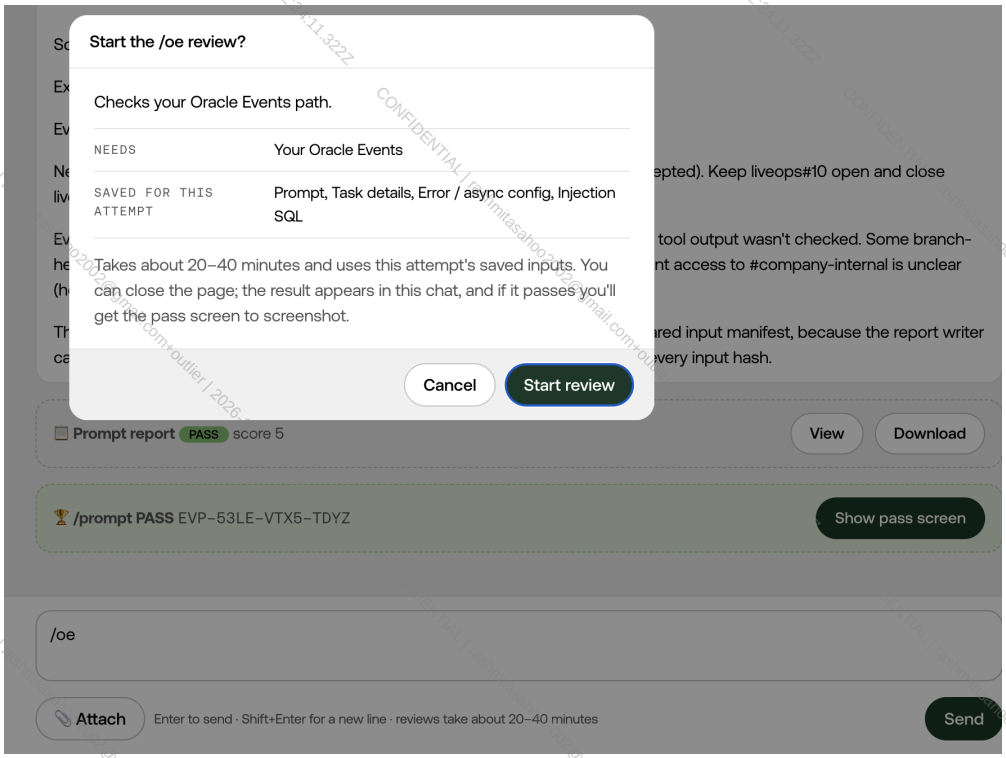

A saved input, exactly as the eval will use it

Sending an input again replaces the saved one. If you change your prompt or your SQL, send the new version before you run the review again.

4 · Run a review

Command	What it checks	What it needs
`/injection`	IDs, structure and chronology of your injection SQL against the universe	Your injection SQL
`/prompt`	Unique answer, feasibility, persona access and clarity	The exact task prompt, plus persona, business function, competency, task skill and horizon
`/hardness`	One Opus trajectory: is the task hard enough to continue	The trajectory JSON from your Opus pre-check, attached as a file
`/oe`	Your Oracle Events path	Your Oracle Events
`/rubric`	Criteria, weights and facts	Your rubric, as JSON

Type the command and the portal shows what the review needs and which inputs are saved for this attempt. Click **Start review** to begin.

Starting a review

A review takes about **20–40 minutes**, and an attempt runs one review at a time. You can close the page while it runs; the result appears in the chat and is saved to the attempt. If an input is missing, the review asks you for it in the chat.

> **THE SAME REVIEWS AS BEFORE**
>
> The portal runs the same evals as the sandbox. A FAIL still blocks the task: fix the artifact and run the review again.

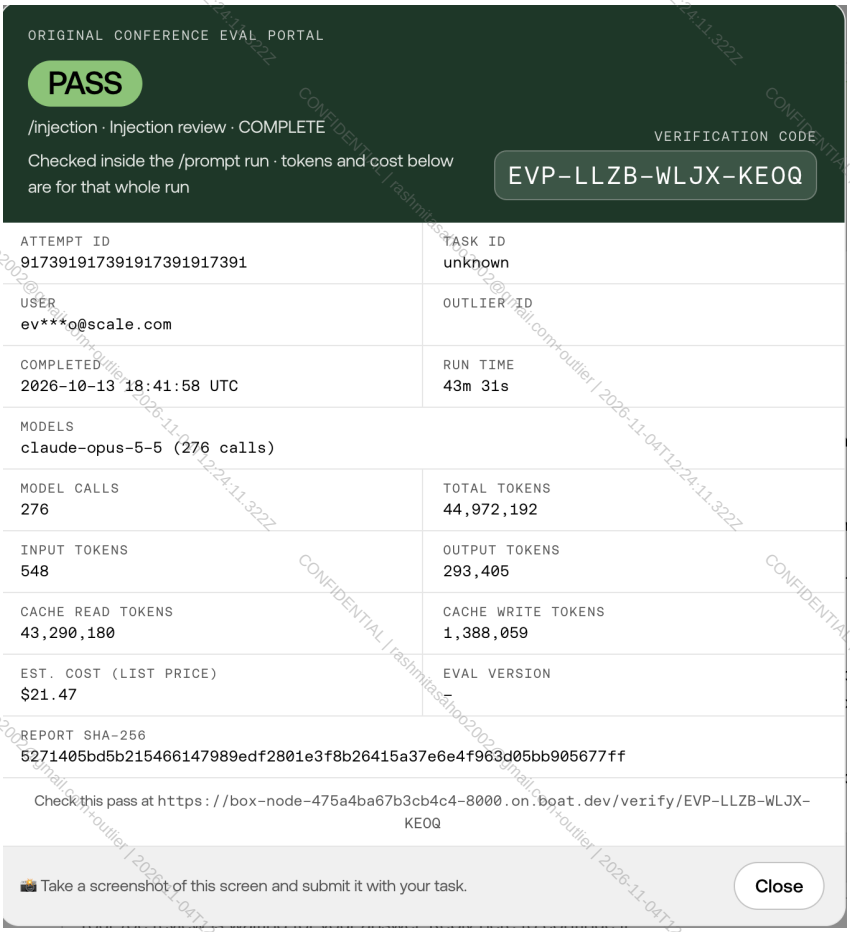

5 · Ask questions

Anything you type without a command is answered as a follow-up about your attempt, for example, "why did criterion 4 fail?". To reach a person, type `/admin` followed by your message.

6 · What counts as proof

When a review passes, a pass screen pops up. A review counts as passed when it returns **PASS**, or **NON-FAIL with a complete run**. The pass screen shows:

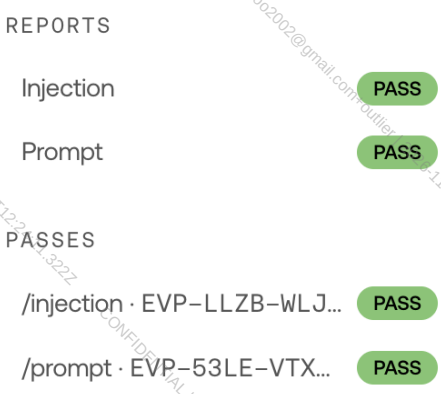

- the verdict and the review it belongs to, for example PASS, /injection · Injection review · COMPLETE
- a verification code in the card EVP-XXXX-XXXX-XXXX
- your attempt ID and user, when the review was completed, and how long it ran
- the model calls and tokens it used, the report hash, and a link to check the pass

A full pass screen

Screenshot the **whole** pass screen, with the verification code visible. Take one screenshot for each passing review.

Closed the pass screen by accident? Reopen it from **Passes** in the sidebar, or click **Show pass screen** on the pass card in the chat. The sidebar lists your **Reports** and your **Passes** for the attempt.

Reports and Passes in the sidebar

Counts as proof	Does not count
The pass screen, whole, with its verification code	Report cards
One screenshot per passing review	Chat messages
PASS, or NON-FAIL with a complete run	FAIL results

7 · Post your proof

1. **Open the form** at the Eval Pass Submission link, signed in with a Google account. The form needs one to accept image attachments.
2. **Fill in your details**: your handle or email address, your task ID, and every review that passed.
3. **Add each pass** by entering its verification code and attaching its pass screen screenshot.
4. **Send one entry per task**. If a later run of the same task passes, update the form with the new screenshot and verification code.

8 · Before you submit, check these things

- ☐ I logged in with my email or Outlier ID and the attempt ID of this task.
- ☐ Every ID, name, date, and figure in my task was checked in the portal, from my persona's view.
- ☐ The saved inputs are the final versions of my prompt, SQL, Oracle Events, and rubric.
- ☐ `/injection`, `/prompt`, `/hardness`, `/oe`, and `/rubric` each returned PASS, or NON-FAIL with a complete run.
- ☐ I have one whole pass screen screenshot for each passing review, with the verification code visible.
- ☐ I submitted every pass screen and its verification code in the Eval Pass Submission form.
